

Whether for a standalone PC or a complicated network of thousands of clients on multiple operating systems, BackupPro is an award-winning, easy-to-use solution for 100% guaranteed data backup and restore.

Today, the issue of data protection (backup and recovery) is more important than ever. If you are searching for a product that offers heterogeneous support and can utilize disk or tape seamlessly for an unlimited number of clients, BackupPro is the choice for 100% data integrity.

Backup Professional is an enterprise backup and recovery software solution. It provides high performance, backup and recovery for a single system or a wide variety of systems across your network.

Backup Professional supports the most complex networks to the most simplistic. The product uses a client/server architecture to provide enterprise-wide services via TCP/IP.

Master and incremental backups for each client or group of clients can be scheduled as often as desired. Backup Professional's internal database maintains every backup on the tape and every file in that backup.

Backup to your choice of media - tape, hard disk or CD. BackupPro is easy to install and operate. The product is proven, feature- and operation-rich, scalable, and available with add-on crash recovery products.

The product is available in standalone, server, client, and clustered versions ... all at a price that is affordable.

For Managers and Administrators, BackupPro will allow you to be sure you are receiving complete data protection - thus allowing you to stretch your DR budget. You can recover your entire office wherever you may be.

BackupPro supports a wide range of operating systems (see reverse for details), disk-to-disk with RAID, open files, and just about any database you could have.
